QUESTION 1:

What is the purpose of the dbccdb database?:

- A. It is required for running any dbcc command
- B. It is required for running the dbcc checkstorage command
- C. It is required for running the dbcc memusage command
- D. It is required for running dbcc trace
- E. It is not required for anything

Answer: B

QUESTION 2:

The sybsecurity database is only needed if you plan on using:

- A. auditing
- B. user defined roles
- C. user defined groups
- D. row level access control

Answer: A

QUESTION 3:

The system table sysindexes exists in which of the following databases? (choose all that apply):

- A. master
- B. sybssystemprocs
- C. tempdb
- D. any user database

Answer: ABCD

QUESTION 4:

Identify the segment names that are common to all databases.

- A. system
- B. table
- C. logsegment
- D. default
- E. index
- F. user

G. data

Answer: ACD

QUESTION 5:

Which databases are required for a properly functioning ASE?

- A. master, model, tempdb, sybsystemprocs, sybssystemdb
- B. master, model, tempdb, sybsystemprocs, sybsecurity
- C. master, model, tempdb, sybssystemdb, sybsecurity, dbccdb
- D. master, model, tempdb, dbccdb, sybsystemprocs

Answer: A

QUESTION 6:

In order to use the unichar and univarchar datatypes to store Unicode data, the ASE default character set must be set to: (choose one)

- A. iso_1
- B. roman8
- C. cp850
- D. utf8
- E. cp437

Answer: D

QUESTION 7:

With the create database command you can specify database size in (choose all that apply):

- A. megabytes
- B. kilobytes
- C. gigabytes
- D. pages

Answer: ABC

QUESTION 8:

With the disk init command you can specify database device size in (choose all that apply):

- A. megabytes

- B. kilobytes
- C. gigabytes
- D. pages

Answer: ABCD

QUESTION 9:

What is true of the master device (choose three):

- A. The master database can be extended only on to the master device.
- B. The master device must be left as a default device
- C. The master device has a virtual device number of 0
- D. The master device location is an optional parameter to the dataserver program on Unix (or the sqlsrvr.exe program on Microsoft Windows) when starting the server
- E. The master device is created by the database administrator executing the "disk init" command
- F. The master device's minimum size increases as the logical page size increases

Answer: ACF

QUESTION 10:

The logical page size can be set

- A. when creating the server
- B. when upgrading the server
- C. when creating a database
- D. when loading the database

Answer: A

QUESTION 11:

Prior to upgrading a server, the upgrade program's eligibility test ensures that (Choose three):

- A. there is enough free space in each database
- B. the requisite system databases (such as master, model, tempdb) exist
- C. no other users are currently logged on
- D. no object names are found on the reserved keyword list
- E. all stored procedures have been recompiled

Answer: ABD
