

70-452

Microsoft

PRO-MS SQL Server@ 2008 Designing a Business Intelligence

OfficialCerts.com is a reputable IT certification examination guide, study guides and audio exam provider. We ensure that you pass your 70-452 exam in first attempt and also get high scores to acquire Microsoft certification.

If you use OfficialCerts 70-452 Certification questions and answers, you will experience actual 70-452 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our Microsoft exam prep covers over 95% of the questions and answers that may be appeared in your 70-452 exam. Every point from pass4sure 70-452 PDF, 70-452 review will help you take Microsoft 70-452 exam much easier and become Microsoft certified.

Here's what you can expect from the OfficialCerts Microsoft 70-452 course:

- * Up-to-Date Microsoft 70-452 questions as experienced in the real exam.*
- * 100% correct Microsoft 70-452 answers you simply can't find in other 70-452 courses.*
- * All of our tests are easy to download. Your file will be saved as a 70-452 PDF.*
- * Microsoft 70-452 brain dump free content featuring the real 70-452 test questions.*

Microsoft 70-452 certification exam is of core importance both in your Professional life and Microsoft certification path. With Microsoft certification you can get a good job easily in the market and get on your path for success. Professionals who passed Microsoft 70-452 exam training are an absolute favorite in the industry. You will pass Microsoft 70-452 certification test and career opportunities will be open for you.

QUESTION: 1

You design a Business Intelligence (BI) solution by using SQL Server 2008. The solution includes reports hosted on a single SQL Server 2008 Reporting Services (SSRS) server. You plan to modify the report server infrastructure to support a scale-out deployment. You need to ensure that the scale-out deployment meets the following requirements:

-Allows users to access any of the Report Server servers by using the original Report Manager URL.-Minimizes network traffic. Which three tasks should you perform? (Each correct answer presents part of the solution. Choose three.)

- A. Add a <HostName> element in the <Service> section of each RsReportServer.config file.
- B. Add the same <machineKey> element in the <system.web> section of all web.config files for each Report Server server.
- C. Add a different <machineKey> element in the <system.web> section of all web.config files for each Report Server server.
- D. Modify the <UrlRoot> element in the <Service> section of each RsReportServer.config file.
- E. Modify the <ReportServerUrl> element in the <UI> section of each RsReportServer.config file.
- F. Modify the <sessionState> element in the <system.web> section of the web.config file in each ReportManager folder.

Answer: A, B, D

QUESTION: 2

You design a Business Intelligence (BI) solution by using SQL Server 2008. The solution includes a SQL Server 2008 Analysis Services (SSAS) database. The database contains a cube named Financials. The cube contains objects as shown in the exhibit.

Measure Groups		
Dimensions	Product Costs	Sale Details
Cost Center (Dim Cost Cen...)	Cost Center Key	Cost Center Key
Manager (Dim Manager)	Dim Cost Center - Cost Center Key	Cost Center Key

A calculated member named Gross Margin references both Sales Details and Product Costs. You need to ensure that the solution meets the following requirements:

-Managers must be able to view only their cost center's percentage of the company's gross margin.-The impact on query performance is minimal. What should you do?

- A. Add dimension-level security and enable the Visual Totals option.
- B. Add cell-level security that has read permissions on the Gross Margin measure
- C. Add cell-level security that has read contingent permissions on the Gross Margin measure.
- D. Change the permissions on the Managers dimension level from Read to Read/Write.

Answer: A

QUESTION: 3

You design a SQL Server 2008 Analysis Services (SSAS) solution. Your solution has a measure named Sales Amount and a dimension named Date. The Date dimension has a hierarchy named Fiscal that has levels named Fiscal Year, Fiscal Quarter, and Fiscal Month. You need to create a calculated member to analyze the Sales Amount share percentage at different levels compared to the total sales for a given Fiscal Year.

Which code segment should you use?

A. Case

```
When [Date].[Fiscal].CurrentMember.Level.Ordinal = 0 Then 1
```

```
Else
```

```
[Measures].[Sales Amount]/([Measures].[Sales Amount],
```

```
Ancestor([Date].[Fiscal].CurrentMember, [Date].
```

```
[Fiscal].[Fiscal Year])) End
```

B. Case

```
When [Date].[Fiscal].CurrentMember.Level.Ordinal = 0 Then 1
```

```
Else
```

```
[Measures].[Sales Amount]/([Measures].[Sales Amount],
```

```
[Date].[Fiscal].CurrentMember.Parent) End
```

C. Case

```
When [Date].[Fiscal].CurrentMember.Level.Ordinal = 0 Then 1
```

```
Else
```

```
[Measures].[Sales Amount]/([Measures].[Sales Amount],
```

```
Descendants([Date].[Fiscal].CurrentMember,
```

```
[Date].[Fiscal].[Fiscal Year], SELF_AND_AFTER)) End
```

D. Case

```
When [Date].[Fiscal].CurrentMember.Level.Ordinal = 0 Then 1
```

Else [Measures].[Sales Amount]/([Measures].[Sales Amount], [Date].[Fiscal].[Fiscal Year].CurrentMember) End

Answer: A

QUESTION: 4

You design a Business Intelligence (BI) solution by using SQL Server 2008. You deploy a SQL Server 2008 Analysis Services (SSAS) cube. The cube contains a measure group that uses table binding. The measure group contains 200 million rows. A job that processes the measure group fails. The log shows an out-of-memory error. The job uses the Process Update option. You need to resolve the error. You need to perform this action without increasing the available physical memory for the SSAS instance. What should you do?

- A. Change the job to process the cube.
- B. Change the job to process the measure group with the Process Full option.
- C. Increase the number of partitions in the measure group.
- D. Increase the number of aggregations in the measure group.

Answer: C

QUESTION: 5

You design a Business Intelligence (BI) solution by using SQL Server 2008. You create a SQL Server 2008 Analysis Services (SSAS) solution. The solution contains a cube that has a measure named SalesAmount. The measure contains customer sales data for the last six months. The cube has a single partition that has the storage property set to real-time hybrid online analytical processing (HOLAP). Queries against the cube must return current sales data that is entered one hour before cube processing. The partition takes two hours to process and the response time for the queries is slow. You need to improve the cube processing and query response time. What should you do?

- A. Change the storage setting of the partition to multidimensional online analytical processing (MOLAP).
- B. Change the storage setting of the partition to real-time relational online analytical processing (ROLAP).
- C. Create a partition for each customer. Set the storage setting of every partition to low-latency multidimensional online analytical processing (MOLAP).

D. Create a partition for every month. Set the storage setting of the partition for the current month to low- latency multidimensional online analytical processing (MOLAP) and that of the other partitions to MOLAP.

Answer: D

QUESTION: 6

You design a Business Intelligence (BI) solution by using SQL Server 2008. Your company processes all transaction data in a Point of Sale (POS) application. Based on the transaction data, you design a solution to predict the type of products a customer tends to purchase on a single visit. You need to identify the appropriate algorithm to design the solution. Which algorithm should you use?

- A. Clustering
- B. Naive Bayes
- C. Association Rules
- D. Time Series

Answer: C

QUESTION: 7

You design a Business Intelligence (BI) solution by using SQL Server 2008. You plan to design a logging strategy for a SQL Server 2008 Integration Services (SSIS) solution. The SSIS solution contains 15 packages. You want to log detailed information about each package. You need to ensure that custom events specific to each control flow task in each package are logged. What should you do?

- A. Configure logging for each control flow task in each package for the required events.
- B. Enable the Log Events window in Business Intelligence Development Studio (BIDS) that has the SSIS solution loaded.
- C. Enable event handling for each control flow task in each package for the required events. Create custom code to perform the logging by using a Script component.
- D. Create a custom assembly that writes to the log, and use the assembly in a Script task. Ensure that the Script task is connected to the appropriate control flow task by using a Failure precedence constraint.

Answer: A

QUESTION: 8

You design a Business Intelligence (BI) solution by using SQL Server 2008. The solution will support a Microsoft ASP.NET application that is deployed to a Web farm. Reports will be deployed to a SQL Server 2008 Reporting Services (SSRS) instance. The databases for the SSRS instance will be deployed to a two-node failover cluster that hosts a single instance of SQL Server 2008. You need to ensure that the SSRS instance remains available even when one of the servers fails. What should you do?

- A. Configure SSRS for native server mode.
- B. Configure SSRS for integrated server mode.
- C. Deploy SSRS on the primary node of the cluster.
- D. Deploy SSRS in a scale-out deployment on the Web farm.

Answer: D

QUESTION: 9

You design a Business Intelligence (BI) solution by using SQL Server 2008. Employees use a Windows Forms application based on Microsoft .NET Framework 3.5. SQL Server is not installed on the employees' computers. You write a report by using Report Definition Language (RDL). You need to ensure that if the employees are disconnected from the corporate network, the application renders the report. What should you do?

- A. Configure the application to use an SSRS Web service by using the Render method.
- B. Configure the application to use an SSRS Web service by using the RenderStream method.
- C. Embed ReportViewer in the application and configure ReportViewer to render reports by using the local processing mode.
- D. Embed ReportViewer in the application and configure ReportViewer to render reports by using the remote processing mode.

Answer: C

QUESTION: 10

OfficialCerts.com Certification Exam Full Version Features;

- Verified answers researched by industry experts.
- Exams **updated** on regular basis.
- Questions, Answers are downloadable in **PDF** format.
- **No authorization** code required to open exam.
- **Portable** anywhere.
- 100% success **Guarantee**.
- **Fast**, helpful support 24x7.
