Exam Name:	TS: Windows Essential Business Server 2008, Configuring		
Exam Type:	Microsoft		
Exam Code:	70-653	Total Questions	184

Question: 1

You work as an IT engineer in an international company which is named WINTEL. You are in charge of the network of the company. You install Windows Small Business Server (SBS) 2008 on a sever which is named server1 in your network. You have Remote Web Workplace installed. Now you are assigned a task to not allow a user named Linc to access Remote Web Workplace. What are two possible ways to accomplish this task? (Each correct answer presents a complete solution. Choose more than one.)

- A. The way of using the Windows SBS Console to remove Lincs user account from the Windows SBS Remote Web Workplace Users security group.
- B. The way of using the Windows SBS Console to modify Lincs user account properties.
- C. The way of using the Windows SBS Console to modify the Standard User role properties.
- D. The way of using Active Directory Users and Computers to modify Lincs user account properties.
- E. The way of using Active Directory Users and Computers to remove Lincs user account from the Windows SBS Remote Web Workplace Users security group.
- F. The way of using Active Directory Users and Computers to remove Lincs user account from the Windows SBS Link Users security group.

Answer: B, E

Question: 2

You work as an IT engineer in an international company which is named WINTEL. You are in charge of the network of the company. You have a Windows Small Business Server (SBS) 2003 environment installed on a server named server1 in the network. Now you use the Migration Wizard to upgrade the (SBS) 2003 environment to a Windows Small Business Server (SBS) 2008 environment to meet the business requirements. In order to have the Windows SBS 2003 server removed from Active Directory Domain Services (AD DS), which three options should you choose? (Each correct answer presents part of the solution. Select three.)

- A. You should stop the Network Policy Server service to remove the Windows SBS 2003 server from Active Directory Domain Services (AD DS).
- B. You should uninstall Exchange Server 2003 from the Source Server to remove the Windows SBS 2003 server from Active Directory Domain Services (AD DS).
- C. You should use the DCPROMO command-line tool to remove the Windows SBS 2003 server from Active Directory Domain Services (AD DS).
- D. You should stop the Active Directory Domain Services service to remove the Windows SBS 2003 server from Active Directory Domain Services (AD DS).
- E. You should have the Windows SBS 2003 server deleted from the Computers container in Active Directory Users and Computers.

Answer: B, C, E

Question: 3

You work as an IT engineer in an international company which is named WINTEL. You are in charge of the company network and you install Windows Small Business Server (SBS) 2008 on a sever which is named server1 in the network. Within the Internal Web site, you intend to deploy a new Windows SharePoint Services site. Before creating the new site, you should make sure that users in the sales department will create the layout and all content of the new site. Which action should you perform?

- A. On the Internal Web site, use the Site Actions menu, and then use the Blank Site Collaboration template to create a new site.
- B. On the Internal Web site, use the Site Actions menu, and then use Team Site Collaboration template to create a new site.

Exam Name:	TS: Windows Essential Business Server 2008, Configuring		
Exam Type:	Microsoft		
Exam Code:	70-653	Total Questions	184
