QUESTION: 1

You have a single Active Directory Domain Services forest that consists of a single domain named contoso.com. Your company has a business partner named Tailspin Toys. Tailspin Toys has its own Active Directory Domain Services forest that contains a single domain named tailspintoys.com. An application named App1 is available to users in the Domain Users group in the contoso.com domain. You need to make App1 available to users in the Domain Users group in the tailspintoys.com domain. What should you do?

- A. Configure the tailspintoys.com domain to trust the contoso.com domain.
- B. Configure the contoso.com domain to trust the tailspintoys.com domain.
- C. Configure the Account Authority to be tailspintoys.com.
- D. Deploy Active Directory Federation Services in the environment.

Answer: B

QUESTION: 2

Your environment contains the servers shown in the following table. You launch the Application Virtualization Management Console on Server3 to connect to the Application Virtualization Management Web Service on Server4. You receive a message stating that an unexpected error has occurred. You need to be able to connect the management console to the management Web service. What should you do?

Server name	Application Virtualization role
Server1	Management Server
Server2	Streaming Server
Server3	Management Console
Server4	Management Web Service
Server5	Data Store

- A. Configure Server3 to be trusted for delegation in Active Directory Domain Services.
- B. Configure Server4 to be trusted for delegation in Active Directory Domain Services.
- C. Configure Server1 to use RTSPS.
- D. Configure Server2 to use RTSPS.

Answer: B

QUESTION: 3

Your environment consists of servers that have Microsoft Application Virtualization Management Server installed and client computers that have Microsoft Application Virtualization Client installed. You enable firewall software on all computers. You perform the following actions on the servers:

Open port 80
Open the file and printer sharing ports
Open port 554
You configure the client computers to use RTSP. When you attempt to stream down an application named App1, you receive an error message stating that the Application Virtualization Client is operating in disconnected mode. You need to ensure that App1 streams successfully to all client computers. What should you do?

- A. Open TCP port 332 on all client computers.
- B. Open TCP port 332 on all servers.
- C. Open TCP port range 49152-65535 on all client computers.
- D. Open TCP port range 49152-65535 on all servers.

Answer: D

QUESTION: 4

Your environment contains the servers shown in the following table. On Server1, you install Application Virtualization Management Server by using a custom installation that does not include the Application Virtualization Management Web Service. You grant your user account SoftGrid administrative privileges. When you launch the Application Virtualization Management Console, a login dialog box appears. You need to ensure that you can launch the Application Virtualization Management Console without entering user account credentials. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

Server name	Software installed
Web1	<ul style="list-style-type: none"> • Windows Server 2003 with Service Pack 1 • Internet Information Services (IIS) 6.0
Server1	<ul style="list-style-type: none"> • Windows Server 2003 with Service Pack 1

- A. Run Setup on Server1. Select the Application Virtualization Management Web Service feature.
- B. Run Setup on Web1. Select the Application Virtualization Management Web Service feature.
- C. In the login dialog box, specify Server1 as the host name.
- D. In the login dialog box, specify Web1 as the host name.

Answer: B, D

QUESTION: 5

You publish a critical application named App1 to your Microsoft Application Virtualization environment. You need to ensure that App1 remains immediately available regardless of how many other applications are streamed to a client computer. In the Application Virtualization Client console, what should you do?

- A. Import App1.
- B. Load App1.
- C. Repair App1.
- D. Lock App1.

Answer: D

QUESTION: 6

A server named Server1 is configured as shown in the following table. You need to upgrade Server1 to Microsoft Application Virtualization Management Server 4.5. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)

Hardware	Software
<ul style="list-style-type: none"> • Pentium III 1-GHz processor • 512 MB RAM • 200 MB free disk space 	<ul style="list-style-type: none"> • Windows Server 2003 • SoftGrid Server 4.0

- A. Install Windows Server 2003 Service Pack 2.
- B. Increase the free disk space to 500 MB.
- C. Upgrade Server1 to SoftGrid Server 4.1 and then upgrade to Microsoft Application Virtualization Management Server 4.5.
- D. Upgrade Server1 directly to Microsoft Application Virtualization Management Server 4.5.
- E. Install 1 GB of RAM.

Answer: A, C

QUESTION: 7

You import a suite of applications into the Application Virtualization Management Console, and you publish the suite of applications to a group named SoftGrid_Users. After logging on, a user in the SoftGrid_Users group reports that icons for the newly published suite do not appear on his Start menu. All other recently published applications appear. You need to ensure that all icons for the suite appear on this users Start menu. You confirm that the correct paths for the OSD and ICON files and the Shortcuts are configured to appear in the Start menu. What should you do next?

- A. Restart the SoftGrid Virtual Application Server service.
- B. Restart the SoftGrid Client service.
- C. In the Application Virtualization Management Console, enable each of the applications.
- D. Import each of the applications to the Application Virtualization Desktop Client console.

Answer: C

QUESTION: 8

Two computers are configured as shown in the following table. You install Microsoft Application Virtualization Management Server on Server1. You install the Application Virtualization Management Console on ManCC. From ManCC you launch a new MMC console and attempt to add the Application Virtualization Management Console snap-in. However, this snap-in is not listed in the list of available snap-ins. You need to ensure that the Application Virtualization Management Console snap-in is available to be added to a custom MMC on ManCC. What should you do?

Name	Operating system
Server1	Windows Server 2003 with Service Pack 1
ManCC	Windows XP with Service Pack 2

- A. Install MMC 3.0 on ManCC.
- B. Install MMC 3.0 on Server1.
- C. Add your user account to the local Administrators group on ManCC.
- D. Add your user account to the local Administrators group on Server1.

Answer: A
