Pass4sureofficial.com is a reputable IT certification examination guide, study guides and audio exam provider, we not only ensure that you pass your 1Y0-306 exam in first attempt, but also you can get a high score to acquire Citrix certification.

If you use pass4sureofficial 1Y0-306 Certification questions and answers, you will experience actual 1Y0-306 exam questions/answers. We know exactly what is needed and have all the exam preparation material required to pass the exam. Our Citrix exam prep covers over 95% of the questions and answers that may be appeared in your 1Y0-306 exam. Every point from pass4sure 1Y0-306 PDF, 1Y0-306 review will help you take Citrix 1Y0-306 exam much easier and become Citrix certified. All the Questions/Answers are taken from real exams.

Here's what you can expect from the Pass4sureOfficial Citrix 1Y0-306 course:

- * Up-to-Date Citrix 1Y0-306 questions taken from the real exam.
- * 100% correct Citrix 1Y0-306 answers you simply can't find in other 1Y0-306 courses.
- * All of our tests are easy to download. Your file will be saved as a 1Y0-306 PDF.
- * Citrix 1Y0-306 brain dump free content featuring the real 1Y0-306 test questions.

Citrix 1Y0-306 certification exam is of core importance both in your Professional life and Citrix certification path. With Citrix certification you can get a good job easily in the market and get on your path for success. Professionals who passed Citrix 1Y0-306 exam training are an absolute favorite in the industry. You will pass Citrix 1Y0-306 certification test and career opportunities will be open for you.

Question: 1

Scenario: Ken configured an Exchange Server and Outlook clients for email synchronization. Client devices are using Microsoft Outlook 2000 and running on Windows XP operating systems. The Secure Access Client is installed on all client devices.

What are two requirements to perform the configurations required for this scenario? (Choose two.)

- A. The administrator must create and configure a policy.
- B. The administrator grants the Download Email Attachment privilege for all users.
- C. The administrator verifies that the client devices have Internet Explorer 5 or 6 with all critical updates installed.
- D. The administrator verifies connectivity from the Access Gateway to the Exchange Server on all the ports to which the Exchange Server listens.

Answer: A, D

Question: 2

Scenario: An administrator wants to provide access to Company.com intranet site from the access server farm.

The home page for the intranet site includes several links to external web pages. The administrator wants to ensure that all links can be accessed through this resource. How can this be configured?

- A. Create a filter that allows access to all the websites linked from the home page.
- B. Enable URL rewriting to provide users access to the pages linked on the website.
- C. Include all the web pages linked from the home page using a URL that contains a wildcard.
- D. Within the New Web Resource Wizard add URLs for the home page and each page linked from the home page.

Answer: D

Question: 3

Whenever a RADIUS or LDAP profile is associated with a logon point, the administrator must _____. (Fill in the blank with a listed option.)

- A. use a Sample Logon Point
- B. deploy the Secure Access Client on every client device
- C. provide a decentralized database to store users' profiles
- D. provide the associated credential during the deployment of the logon point

Answer: D

Question: 4

Scenario: An administrator of an enterprise, where users' actions are restricted in terms of downloading, installing, and running programs on their computers, receives a service ticket from a user who is complaining of not being able to install the Endpoint Analysis Client software. What could be the cause?

- A. The user account being used is not a member of the users group.
- B. The user account being used is a member of the administrator group.
- C. The user account being used is not a member of the power users group.
- D. The user account being used is a member of a domain user account, which is a member of the local administrator group.

Answer: C

Question: 5

Scenario: An administrator is required to configure the setting that determines whether users can reconnect to both active and disconnected sessions or only to disconnected sessions while creating a logon point. Which option should the administrator enable?

- A. Window
- B. Session Time-out
- C. Domain Prompting
- D. Workspace Control

Answer: D

Question: 6

Along with Active Directory, which other two authentications could be implemented in order to provide Advanced Authentication? (Choose two.)

- A. Smart Cards
- B. LDAP authentication
- C. RSA Security SecurID
- D. Secure Computing SafeWord PremierAccess

Answer: C, D

Question: 7

A client device is scanned but the user receives a message that he is denied access to the network. Which two actions can help the administrator determine which endpoint analysis scans failed? (Choose two.)

- A. Examine the "Endpoint Analysis Scan Results" snap-in
- B. Modify the Disallowed.ascx page to show the scan results
- C. View the event log on the Advanced Access Control server
- D. Export the results to a comma-separated list using an endpoint analysis command-line tool

Answer: B, C

Question: 8

In an environment that restricts client device access to resources based upon the presence of a specific version of an antivirus software, which step must be completed for a continuous process scan?

- A. Clear the MD5 field.
- B. Browse to the client version of the antivirus executable.
- C. Provide the registry path and values for the antivirus software.
- D. Type the earliest date stamp that is acceptable for the process.

Answer: B

Question: 9

Scenario: You are in the process of deploying Advanced Access Control in your company's IT environment.

The corporate IT policy requires that all users have access to the company's employee portal website, but only the sales team has access to their web-based CRM application. Which configurations best meet the requirements of the described environment?

- A. Create a single web resource and add the URL for both the employee portal and the CRM application. Create a single access policy and grant only the sales team access to the CRM application.
- B. Create two separate web resources; one for the employee portal and one for the CRM application. Create a single access policy and deny all non-sales team employees access to the CRM application.
- C. Create two separate web resources; one for the employee portal and one for the CRM application. Create two separate policies; include the employee portal in one and include the CRM application in the second. Add a filter to the CRM policy that denies all non-sales team employees access.
- D. Create two separate web resources; one for the employee portal and one for the CRM application. Create two separate policies; include the employee portal in one and include the CRM application in the second. Grant everyone access to the employee portal policy and only the sales team access to the CRM application policy.

Answer: D

Question: 10

After providing the configuration database server and the access server farm name, which additional step must an administrator perform to change the farm membership of server?

- A. Run discovery in the Access Suite Console
- B. Restart the server for which the farm membership was changed
- C. Provide the credentials used to access the configuration database server
- D. Restart the license server for the access server farm where the server was added

Answer: C

Question: 11

Which statement regarding the rules for configuring a connection policy is true?

- A. Multiple connection policies can be used for a single session.
- B. Multiple connection policies cannot be used for a single logon point.
- C. IP address pools can be defined in the connection policy for dynamic IP addressing.
- D. Names can be duplicated among several connection policies as long as the farm name is included.

Answer: C

Question: 12

Scenario: The password for the service account has been compromised. The administrator decides to use a new user name and password for the service account. What are two requirements for changing the service account? (Choose two.)

- A. The Access Suite Console must be closed.
- B. The administrator must use the Server Configuration Tool.
- C. All the services must be manually stopped and then restarted again.
- D. The administrator must use the Access Gateway Administration Tool.

Answer: A, B

Question: 13

When creating a custom filter that requires client devices to have a specific certificate installed and to enter from a specific logon point but NOT pass an endpoint analysis scan which detects a worm on the client system, which logical expression should be used to define the conditions
